

# APPRECIATING THE NATURE OF CARP

The carp's intelligent and sensitive behaviour makes for an incomparable fishing experience. These fish require anglers to truly understand and admire their catch. Okuma aims to help carp anglers enjoy this unique connection to nature.

Okuma boasts decades of industry experience creating quality gear and equipment for anglers across all disciplines.

Now it has applied this expertise to designing quality products specifically for carp anglers. The 8k, INC-6000 and LS-6K spinning reels are just a few of its reels specifically crafted for those who appreciate the nature of carp.

## PRODUCT INTRODUCTIONS

The 8k spinning reel is the result of Okuma's great concept to create a long casting spinning reel. It features a worm shaft transmission system, super slow oscillation system and a 45mm super long stroke spool.

Okuma's LS 6K Baitfeeder reel is also made for long casting carp fishing, featuring

an on/off auto trip bait feeding system, slow oscillation system with 30mm long stroke spool trip and worm shaft transmission system, which is said to make casting smoother and longer.

Okuma has redesigned the transmission system of its INC-6000 reel, retaining the shallow spool and 30mm long stroke spool to minimise the body size and weight with

the goal of bringing anglers a better fishing experience.

Meanwhile, its Dyna Drag XP Baitfeeder reel incorporates a cyclonic flow rotor, and on/off auto trip bait feeding system, which allows anglers to disengage their spinning reel spool and allow their bait to run freely.
